MADE TO LAST

WELCOME TO ID[®] IDENTITY

Every day, we deliver clothing to businesses and events across Europe – with a focus on supporting the end customer's overall visual identity. Based in Denmark and with an international perspective, we strive to provide high-quality clothing with an emphasis on function, design, responsibility, and a long lifetime in circulation.

RESPONSIBLE
WORLD!

ID®'S FOCUS & RESPONSIBILITY PROFILE

Social responsibility

Each year, we focus on working conditions, both social and ethical. Our goal is to ensure that every employee is part of the ID® community – not only in Denmark, but also internationally. It is people who create identity.

.....

Focus on the environment

We support environmentally friendly technologies, products, and raw materials. In collaboration with our suppliers, our goal is to minimize our environmental impact in the textile industry. This is an ongoing effort that we continue to develop year after year.

.....

Transparency

We want to be transparent and actively communicate our work within responsibility. We believe that increased transparency creates greater value when we demonstrate our efforts related to the environment, social responsibility, and product longevity.

.....

Lifetime in circulation

All our products have undergone a strict process to ensure product quality. We want to ensure that each product has a long lifespan and that it is produced and handled correctly throughout the entire process.

CERTIFICATIONS AND MEMBERSHIPS

PRODUCT CERTIFICATIONS

OEKO-TEX® STANDARD

Annex 4, product class 2

OEKO-TEX® ensures that the product complies with limit values for harmful substances. Clothing labeled with OEKO-TEX® STANDARD is subject to requirements on pH levels and the content of substances such as pesticides and heavy metals.

OEKO-TEX® STANDARD

Annex 6, product class 1

ID® offers a wide range of OEKO-TEX® STANDARD certified products, including Annex 6, product class 1, which imposes even stricter requirements on the content of health- and environmentally harmful substances in textiles.

OEKO-TEX® STANDARD

Recycled, annex 4, product class 2

The OEKO-TEX® Recycled certificate applies to products that contain more than 20% recycled fibre material. In connection with the recycling process, the material undergoes specific test procedures. OEKO-TEX® guarantees that the product does not contain harmful substances.

OEKO-TEX® STANDARD

Recycled, annex 6, product class 1

Covers products that contain more than 20% recycled fibre material. During recycling, the material is subject to special test procedures. OEKO-TEX® ensures the clothing does not contain harmful substances. Annex 6, product class 1 includes even stricter requirements.

The EU Ecolabel is your guarantee that clothing marked with the EU Ecolabel impacts the environment as little as possible. It ensures that the garments do not contain pesticide residues or other environmentally harmful chemicals, that environmentally friendly dyes are used, and that wastewater is managed responsibly.

The product is developed to meet the hygiene requirements in all food production as defined by HACCP – certified by Hohenstein.

ISO 15797 is an international standard for assessing a product's suitability for industrial laundering. The tests are carried out in close cooperation with external experts.

FEATURE

Feels so right

TENCEL™ Lyocell and Modal fibres give fabrics a natural softness, making them feel pleasant against the skin. Effective moisture control ensures TENCEL™ Lyocell and Modal fibres support a natural dry feeling.

"The best way to reduce your environmental impact is to take good care of the clothes and use them for as long as possible."

COMPANY CERTIFICATIONS / MEMBERSHIPS

OEKO-TEX® STEP CERTIFICATION

The STeP certification from OEKO-TEX® is a company certification that confirms our responsibility as a business. It ensures responsible production for both people and the environment – with a focus on six key areas: environmental management, environmental performance, quality management, chemical management, social responsibility, and health & safety.

BETTER COTTON INITIATIVE

ID® is a proud member of the Better Cotton Initiative. BCI aims to make global cotton production better for the people who produce it, better for the environment it grows in, and better for the industry's future. "Better Cotton" is purchased through a so-called Mass Balance System and cannot be physically traced to the final products. By using the Mass Balance System, BCI can reach more producers, which means that more responsible methods are introduced globally.

Move Forward with Confidence

BUREAU VERITAS

The Bureau Veritas Group is one of the world's largest companies in inspection, classification, advisory, and certification services. They deliver high-quality services to help customers meet growing challenges in quality, safety, environmental protection, and social responsibility.

Member

AMFORI BSCI

ID® is a member of amfori BSCI (Business Social Compliance Initiative), an alliance of 2,400 European companies that have formulated a set of common rules for purchasing and production in countries outside the EU. This means that production must not involve child labour, forced labour, or any form of discrimination. It guarantees safe working conditions and fair wages. The rules also take significant account of environmental concerns.

ACCORD

The Accord on Fire and Building Safety in Bangladesh, effective from 1 November 2023, is a three-year independent, legally binding agreement between producers, suppliers, and unions in the textile industry. It aims to build a safe and healthy Ready-Made Garment (RMG) industry in Bangladesh.

WE SUPPORT

FN GLOBAL COMPACT

ID® participates in the Global Compact initiative. At ID®, we are committed to responsible action and contributing to sustainable development.

We are proud to be a member of the UN Global Compact, which provides a foundation for our work with internationally recognised principles on: Human Rights – Labour – Environment – Anti-Corruption.

MADE TO LAST

MATERIALS

Combination of cotton and polyester to get the best from both qualities. Cotton provides softness and breathability and polyester provides durability and stability.

WASHING

Can withstand being washed at 80°C (white) or 60°C (colours).

SIZE & COLOURS

Choose between 22 colours and a size range from XXS - 7XL.

LARGE STOCK

Very large stock of products – high delivery performance.

SUPPLIER RELATIONS

Long term relations to our suppliers around the world ensures value throughout the process.

TREATMENT

PRO Wear treatment for low shrinkage, extra stability and long lifetime

SEAMS, BUTTONS & ZIPPER

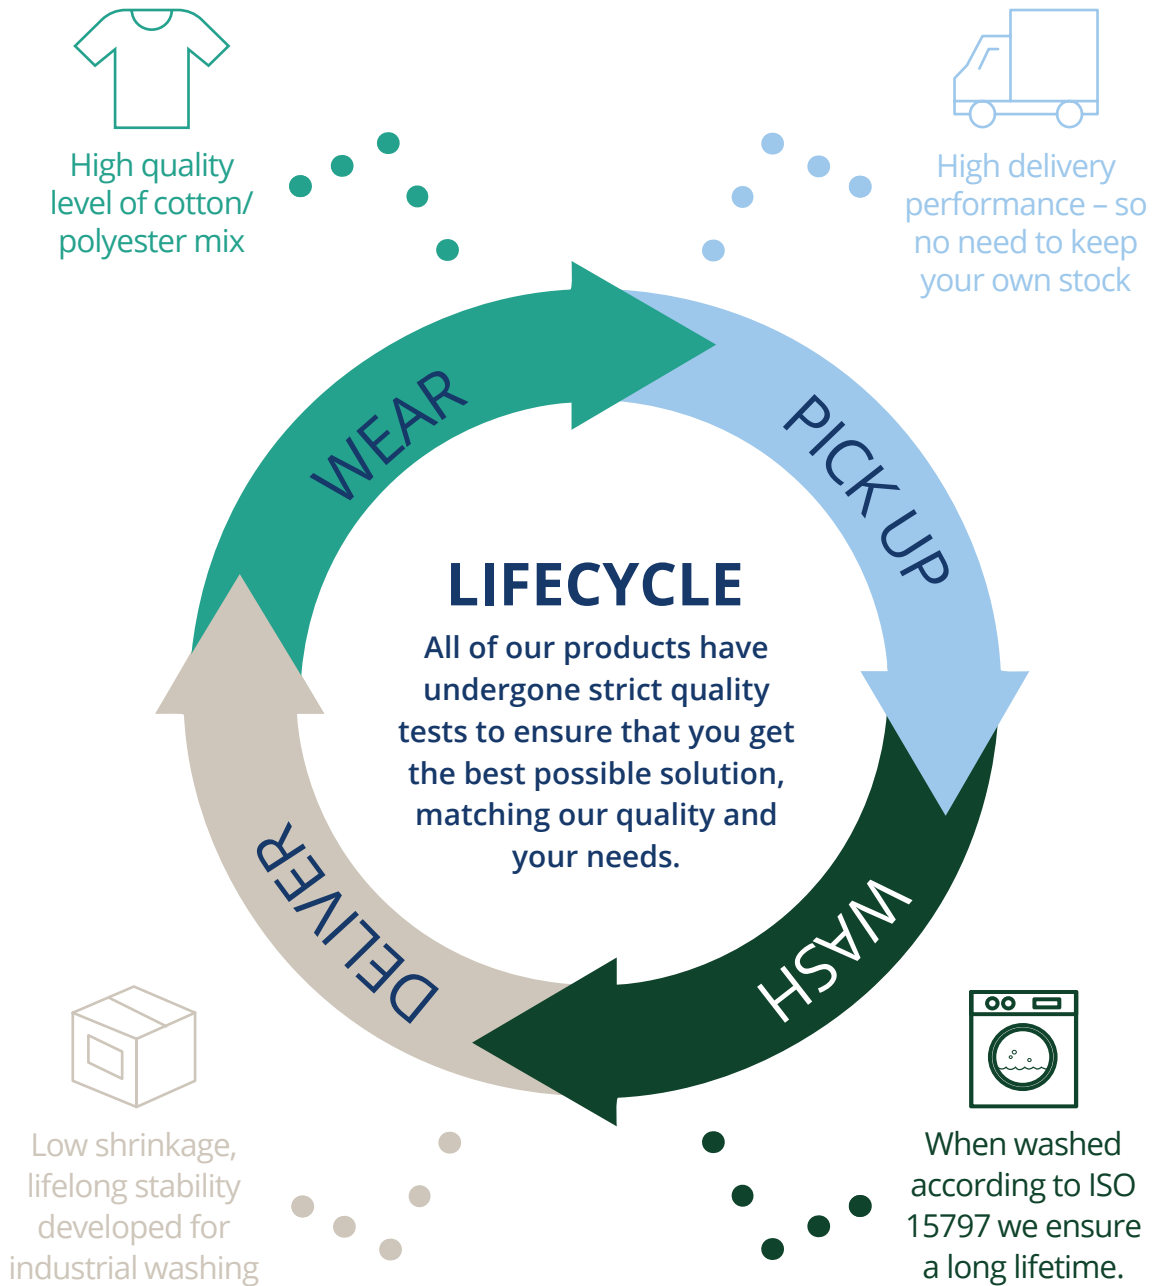

Strong seams securing long life time. All plastic buttons are stained through, and all press studs are made of stainless metal, so both types are well suited for industrial washing. Strong YKK zippers.

CERTIFICATIONS

OEKO-TEX® certified, which is your guarantee that the clothing contains no harmful substances. EU Ecolabel certified, which is your guarantee for environmentally friendly production and manufacturing of products.

WASH, WEAR AND REPEAT

CSR is about taking responsibility for a company's impact on people and the environment. This has given us a reputation as one of the best in the industry at delivering high quality,

well-designed and durable products. And we will continue to do so. We believe that there are always customers who understand the value of quality.

ONE-STOP SHOPPING

ID® SERVICE

READY TO WASH

You can do all your shopping in one place, saving time, money and administration. Since we handle the entire clothing process at ID® Identity, you avoid the long delivery times that other production options may involve. It does not get any easier than this.

JUST LEAVE IT TO US

Let us make our products into yours. ID® Service can add logo, embroidery or chip to your company clothing. It does not have to be expensive or time-consuming. It is easy, faster and saves time.

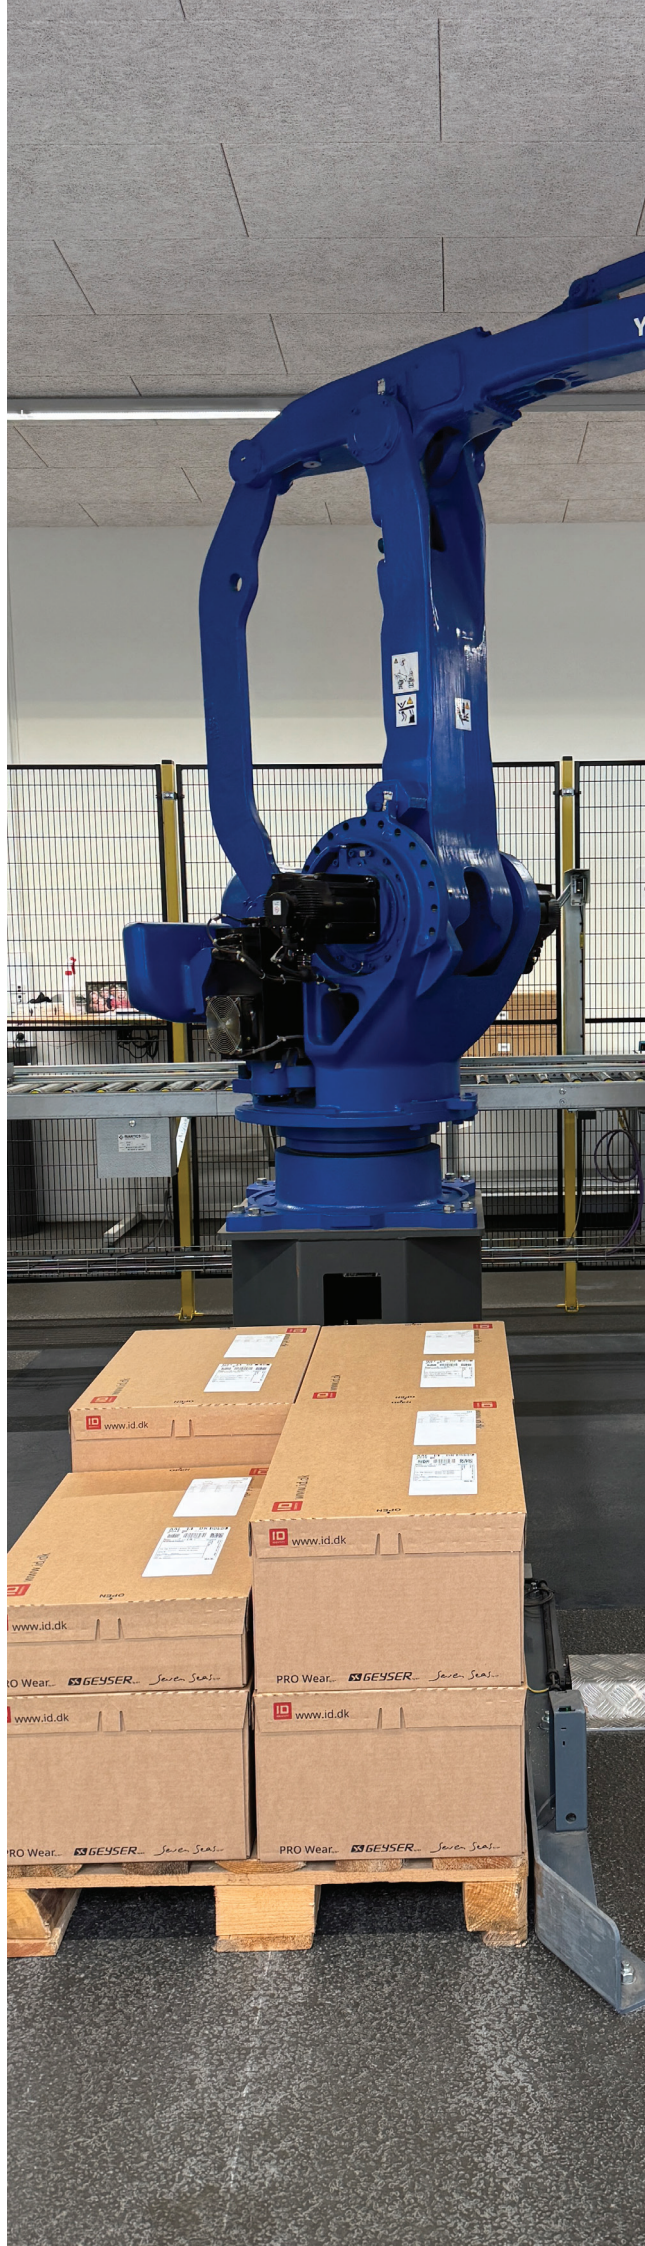

We make our products into yours

Did you say chip?
Yes, of course we can attach chip

Product ideas?
Let our designers help you

WE DO NOT SHIP AIR BUT PRODUCTS

Our packing robot adapts the packaging to the content and volume of the goods. The new advanced technology contributes to a more eco-friendly and sustainable logistics management.

ALWAYS IN STOCK

ID® WAREHOUSE

A STABLE PRODUCT RANGE

One of ID®'s greatest strengths is that we always stock an extensive basic range. At ID® you can choose products from a wide collection – and we have them in stock in large quantities.

USE YOUR T-SHIRT AGAIN AND AGAIN

LCA | Life cycle analysis

THE T-SHIRT'S ENVIRONMENTAL FOOTPRINT

WHAT DOES YOUR T-SHIRT GO THROUGH?

When we say that “we go all the way,” we look at the various environmental consequences of the clothing industry - from raw material extraction to production, transport, use and ultimately disposal.

RAW MATERIALS

- ✓ Fibre extraction
- ✓ Yarn production
- ✓ Fabric production
- ✓ Fabric dyeing
- ✓ Post-processing

PRODUCTION

- ✓ Cutting
- ✓ Fabric
- ✓ Sewing
- ✓ Packaging

TRANSPORT

- ✓ Transport to head office
- ✓ Distribution to dealers and end customers

USAGE

- ✓ Using the clothes
- ✓ Washing the clothes

END OF LIFETIME

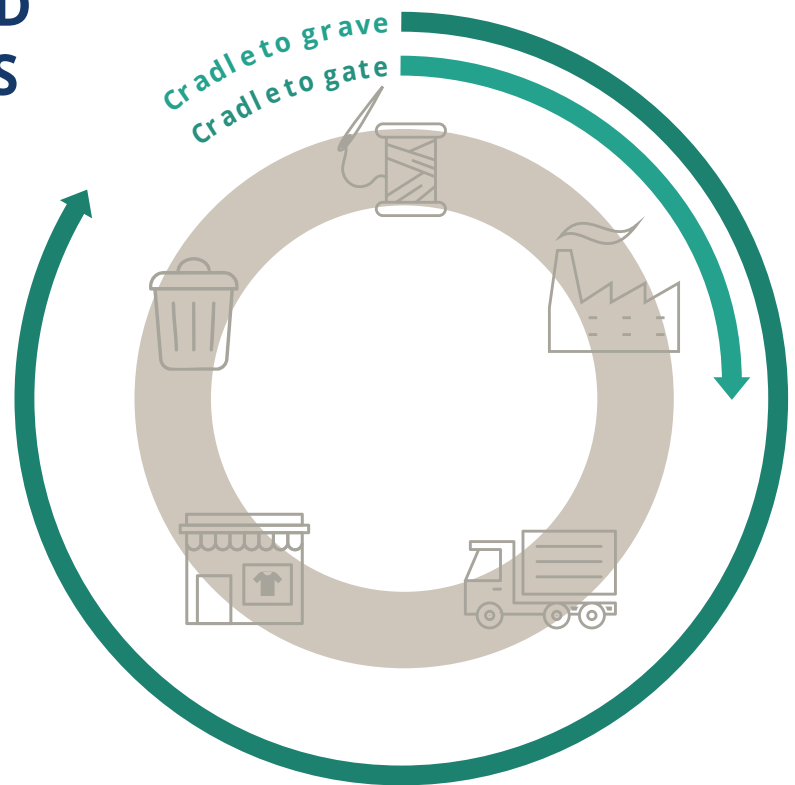

- ✓ Disposal
- ✓ Recycling/re-use

Read more and see LCA results at:
id.dk/en/use-your-t-shirt-again-and-again

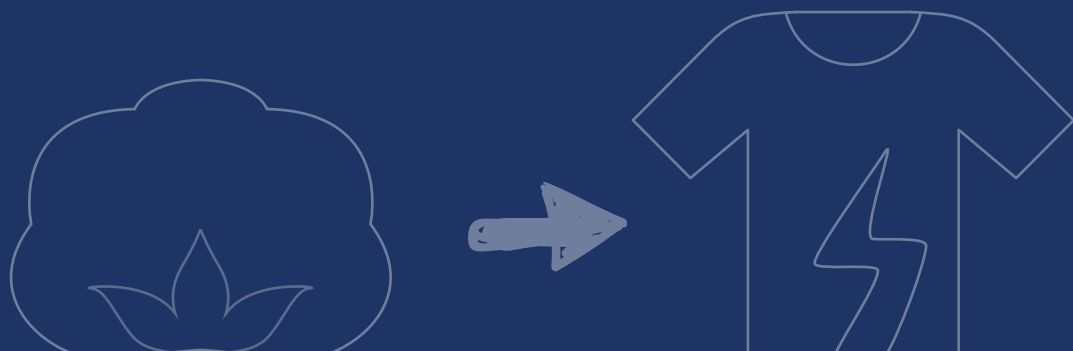

WHY PRODUCT LCAS CAN'T BE COMPARED ACROSS COMPANIES

A product Life Cycle Assessment (LCA) shows the environmental impact of a product—from raw materials to disposal. But LCAs from different companies can't be directly compared. Some LCAs only go “cradle to gate” (ending at the factory), while others go “cradle to grave” (including use and disposal). Companies also use different data and methods, so results can vary a lot.

LCAs are useful for improving your own product—but not for comparing with others.

// At ID® we believe that the most responsible T-shirt is the one that can be used again and again.

DO YOU KNOW WHAT'S AVAILABLE ON ID.DK?

Id.dk works as a digital archive – filled with information you can access freely whenever you need it. You can also download washing instructions, product images, and technical specifications – all gathered in one place.

In short: what you're looking for might already be right at your fingertips.

USER-FRIENDLY WEBSHOP SOLUTION

Access live-updated data directly in the webshop

TRANSPARENCY:

MY ID®

A central entry point to your documents and order data. Here you can download invoices, view past and current orders, and access account statements. You always have access to your information when you need it.

AMFORI REPORTS

It is possible to find, view, and download the factories' amfori BSCI social reports at id.dk. The production site and country are also available.

STOCK SITUATION

The website is continuously updated, making it possible to view the current stock status at any time.

PRODUCT SHEETS

Quickly and automatically generate an updated product sheet for a selected product. The sheet includes relevant data, images, and an overview of colours and sizes – ready to attach to a quote or use in a product presentation.

MEASUREMENT CHART

It is possible to download measurement charts tailored to each individual product on the website.

MATERIAL DESCRIPTION

A central entry point to all material descriptions. Here you can view both main materials and secondary materials—always available when you need them.

DOWNLOAD MANAGER

A digital library where you can download high-resolution images, videos, icons and technical product data files. Everything is organised for quick access – ideal for your webshop, catalogues or presentations.

- Half-moon at neck

Certificate

NB: The product sheet only applies to the chosen colour

Better Cotton Membership:

DRIVING POSITIVE IMPACT FOR FARMERS AND THE ENVIRONMENT

As part of our ID responsibility, joining Better Cotton reflects a commitment to ethical sourcing and sustainable development. Through this membership, we support cotton farmers in adopting practices that reduce water consumption, limit pesticide use, and improve soil health.

These changes lead to safer working conditions, increased productivity, and stronger communities. At the same time, Better Cotton helps protect biodiversity and reduce the environmental footprint of cotton production—ensuring that both people and nature benefit from more responsible choices.

Better Cotton farmers are farmers who care for the environment and implement the principles of Decent Work.

IT IS NOT A PRODUCT

- But a responsible way to source cotton

HISTORY

GOALS

QUALITY LAB

Steps to ensure quality and longevity

A product is only added to our range once it meets high standards for quality and durability.

MATERIAL SELECTION

We select materials for functionality, durability, and responsibility

FIT AND COMFORT

Garments are designed for good fit and movement.

QUALITY ASSURANCE

Products are tested in our Quality Lab and laundries for colourfastness, sizing, shrinkage, and durability.

Quality lasts longer
– so does our responsibility

LONG-LASTING RELATIONSHIPS WITH OUR SUPPLIERS

Bulgaria 

Turkey 

China 

Bangladesh 

Cambodia 

Production countries

We strive for long-term supplier partnerships built on loyalty and close collaboration to create quality products we can be proud of.

PRO WEAR CARE EU ECOLABEL

We want to make a positive difference to the people we work with. This is why we introduced the PRO Wear CARE textile series, which carries the EU Ecolabel.

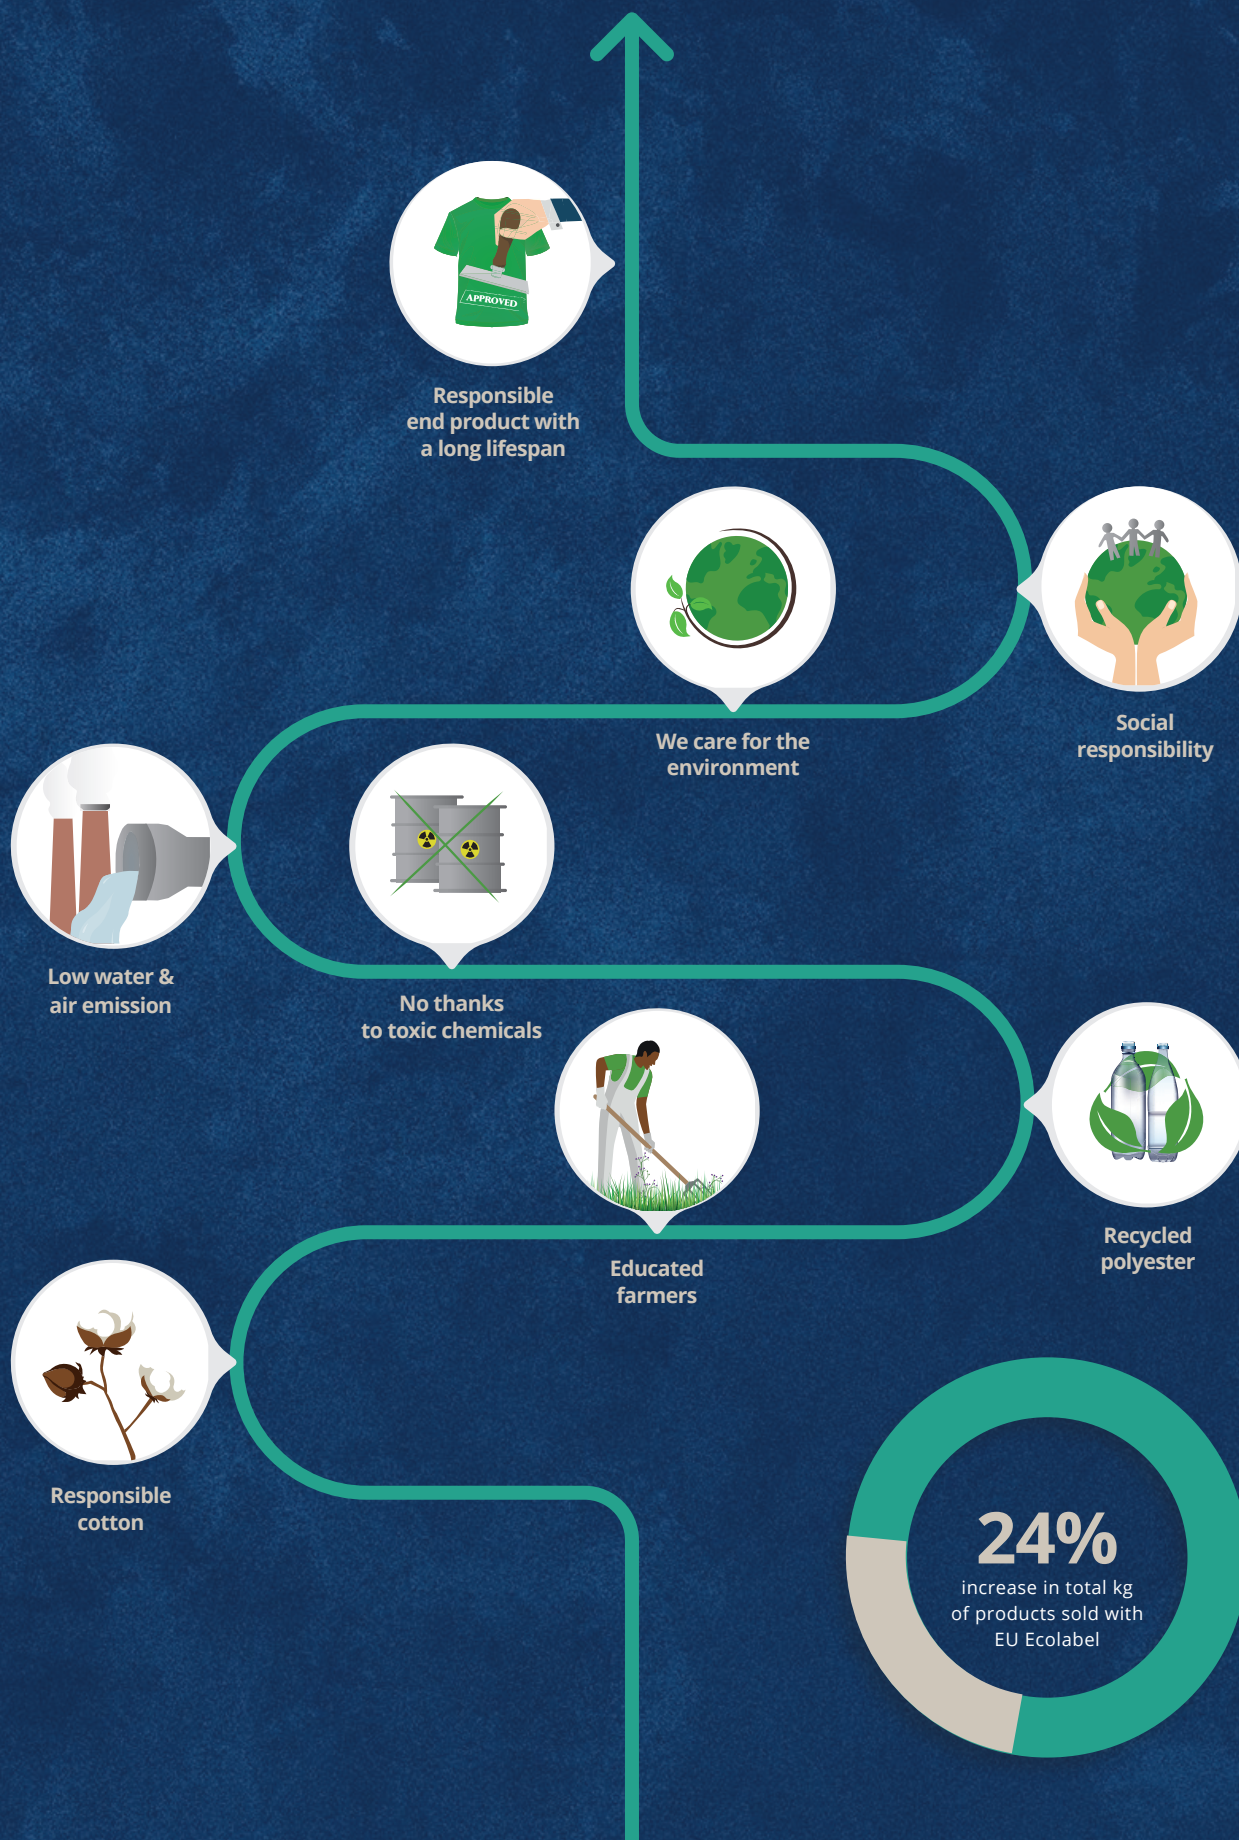

The EU Ecolabel is your guarantee that the production and manufacturing processes have as little impact on the environment as possible.

BETTER FOR ENVIRONMENT

- ✓ More sustainable fibre production
- ✓ Restrictions on hazardous substances
- ✓ Tested for durability

When choosing EU Ecolabelled products, you are helping to make a difference

WHAT DO THE SYMBOLS MEAN?

FITTING

	Close-fitting model
	Tight fitting model
	Regular model
	Regular model
	Loose fitting model
	The cut away collar is suitable for ties and is also considered as one of the more formal collar types
	The Kent collar is distinguished by a classic shape that provides a more modern look
	The regular collar tips are more widely spread making it perfect for wider tie knots

WASHING SYMBOLS

	Normal wash (40 degrees)
	Normal wash (60 degrees)
	Normal wash (80 degrees)
	No bleach
	No ironing
	Ironing at low temperature max. 110 degrees
	Ironing at medium temperature max. 150 degrees
	No chemical cleaning
	Do not tumble dry
	Tumble dry at low temperature max. 60 degrees
	Tumble dry at normal temperature max. 80 degrees
	Hang drying
	Chemical cleaning with correct liquid

FEATURES

	Easy Care-finish require minimal ironing. To achieve the best result, the shirt should be ironed after washing before it is completely dry. The shirts can be tumble-dried at low heat and afterwards placed on a hanger
	Non Iron-finish require minimal or no ironing. After washing and possibly tumble drying at low heat, hang the shirt to naturally dry on the hanger and it is ready for use
	4000 MVP
	5000 MVP
	Windproof material
	Water repellent product made of waterproof or water resistant material, without waterproof seams
	10,000 mm water column pressure
	Breathable, wind and water resistant three-layer membrane
	Taped seams for maximum protection against wind and rain
	ISO 15797 is an international standard for evaluating a product's suitability for industrial washing. The tests are carried out in close cooperation with external experts.
	Moisture transmitting, breathable and quick-drying material
	Quality zipper from YKK
	Breathable, wind and water resistant and moisture transmitting
	TENCEL™ Lyocell fibres give fabrics a natural softness, making them feel pleasant against the skin. Effective moisture control ensures TENCEL™ Lyocell fibres support a natural dry feeling. TENCEL™ is a trademark of Lenzing AG.
	Water-repellent BIONIC-FINISH® ECO The product is treated with BIONIC-FINISH® ECO, a fluorine-free water-repellent finish that protects against light rain and moisture without waterproof seams. The treatment is based on dendrimer technology, free from halogens and APEO, and provides durable water and dirt repellency while maintaining breathability and comfort.
	Recycled fibre is fibre produced from recycled waste materials. The waste materials are collected, sorted, and broken down to a stage where they can be reused as fibre. The fibres consist of 100% recycled fibres or are blended with new fibres, which are then spun into yarns that are either woven or knitted into new textiles. The reuse of fibres helps to minimise the need to produce new raw materials.

INDUSTRIAL WASHING RECOMMENDATIONS

The PRO Wear by ID® line is developed and tested for industrial washing. Below we have passed on some useful advice based on many years of experience which may contribute to optimal use and durability.

Our experience tells us, that there are differences in routines and methods in industrial washing. The differences that may be experienced could be in e.g. shrinkage and colour.

The following instructions are only a guide and serves as a supplement to our clients' own experiences.

General comments

Always check the recommendation on the care label of the garment. The products are tested according to ISO 15797, but we also recommend own wash/drying test before use.

All garments should be washed at least once before taken into use. This is important due to chemical residues and excess dye from production of fabrics and to inevitable shrinkage (also for "pre-shrunk" products). Also to minimize possible surplus fibres/fuzzing from fleece and sweat products which are brushed inside, which disappears after 2-5 washes. We recommend tumble drying during initial washing of brushed garments to reduce excess fibers.

Consider shrink variations up to app. +/- 5-7% for sweat products and other up to app. +/- 5%, and fabrication tolerances up to +/- 1,5 cm.

Industrial washing

Do not apply bleaching and chemicals with optical brighteners on coloured products. Effective chemicals incl. chlorine, disinfectants and optical brighteners can reduce life time and influence quality/appearance of fabrics and accessories.

The indicated type and dosage from the supplier of chemicals must be followed closely.

Textiles should always be sorted/washed according to type and colour.

Wash the garments with the inside out and close zippers and velcro.

Avoid "over drying". Choose the correct drying temperature according to the fibre type of the garment. Remember that polyester dries faster than cotton, e.g. fleece products.

Steamer (tunnel) drying may influence fit/shape and shrinkage pattern. Carry out own test to clarify possible effects from the drying method. Steam must be added to avoid "over drying."

How to extend the durability of logos

It is important to choose logo quality and type (print/transfer, embroidery) considering the use and washing/drying method of the garment.

The wash instruction in the care label on the clothes also applies for the logo.

Harsh chemicals such as bleach etc. can affect the logo in wash.

Other ID® products in industrial washing

Other ID® products besides PRO Wear by ID® are used in industrial washing. However, it is very important to follow the instructions on the care label for such products. Especially for chemicals, temperatures and drying methods there are certain limitations which must be observed.

ID® cannot assume any responsibility for complaints arising from inappropriate use and/or washing of our products.

By any complaints, please provide 3-5 samples + information about the production number from the carelabel inside, extent/volume and a copy of the washing/drying process and chemical prescription.

QUALITY WEAR FOR A 1000 JOBS

Quality clothing brings
people together every day across
thousands of professions,
regardless of title, role or function.
The clothing is a symbol of the
community that arises when
we are dressed alike.
